

Automatic Pool Roller

OPERATION

ON

Manually pull your cover onto the pool easily with the power assist roller.

OFF

Push the button. The Automatic Pool Roller rolls up the cover by itself.

FEATURES

CAN ACCOMMODATE ANY POOL COVER

The Automatic Pool Roller system allows for the installation of almost any blanket or pool cover onto the reel. Once the blanket is sized for the pool the cover is attached to the roller system.

ADJUSTABLE WINDUP SPEED CONTROLLER

Just set the roller to the desired speed.

POWER ASSIST

The Automatic Pool Roller will assist you in pulling the cover off the roller and onto the pool.

NO TRACKS REQUIRED

The Automatic Pool Roller allows you to pull your cover directly onto the water at your speed. Electric motors assist you with rolling the cover off the roller by yourself and will automatically rewind onto the roller electrically.

ELECTRICALLY DRIVEN

With a push of the button the Automatic Pool Roller rewinds your pool cover off the swimming pool. Low voltage motors automatically rewind and allow for assisted manual unwinding the pool cover from the roller reel, replacing the manual cranking of older systems. All electrical components are encased in protective housings.

POWER KNOB

To turn the unit on just rotate the knob clockwise and set the speed you require, similar to a dimmer switch. The electric Automatic Pool Roller won't start until you power it up.

EASY ASSEMBLY

The Automatic Pool Roller is comprised of telescoping aluminum tubes that adjust to fit the pool width. The tubes are then attached to the A-Frame End Supports and ready for connecting the pool Cover.

SECURE INSTALLATION

The End Support Rubber Mounts can be easily secured to the pool deck for areas that experience high winds.

Our products are designed to the highest engineering standards for all climatic conditions, resulting in the highest quality systems in the industry. Each system is engineered to ensure safety and ease of use in a graceful and elegant system. Only the highest quality materials are used to ensure reliability, durability and extended service life.
